

**Global Research Editor's Note**

*This report, which is yet to be verified, must be taken very seriously. We are dealing with nuclear war.*

*A tactical nuclear weapon (e.g. B611-11) is a bunker buster bomb with a nuclear warhead.*

*It has an explosive capacity between one third and six times a Hiroshima bomb.*

**Michel Chossudovsky, December 1, 2011**

*The United States has used tactical nuclear weapons in its military campaign against Iraq and Afghanistan, a Middle East expert tells **Press TV**.*

“Tactical nuclear weapons were used, at least one in Iraq and several were used in Afghanistan –in the Tora Bora mountains,” Peter Eyre, a Middle East consultant, said.

B611-11 Tactical Nuclear Weapon

Eyre pointed out that the atomic bomb dropped on Afghanistan's Tora Bora region was so powerful that it actually created an earthquake there.

The analyst went on to say that the use of such lethal weapons by US military, which is a gross violation of the Geneva Convention, has been sanctioned by the US presidents; thus they should be prosecuted for war crimes.

“In America, the ultimate commander in chief is the president,” Eyre said, adding that the President has the final say in using such weapons.

The US is the first country in the world to develop nuclear weapons and the only one to use them.

Thousands of people were killed in August 1945, when the US bombers dropped atomic bombs on Japan's Hiroshima and Nagasaki.

The US invaded Afghanistan in 2001 under the pretext of toppling the Taliban regime, claiming that the militants have refused to hand over Osama bin Laden.

The US also invaded Iraq in 2003 under the excuse of destroying alleged weapons of mass destruction (WMD) belonging to former dictator Saddam Hussein.

Many civilians, including women and children, have been killed as a result of these wars.

The US-led war in Afghanistan, with civilian and military casualties at record highs, has become the longest war in the US history.
